**Title: AI Tool Prompt Engineering Report**

# PROMPTING PHASE

## A. Original Prompt

Chapel Interior Render Improvement

the picture above is a chapel interior, improve my render but do not remove or change anything, improve material quality and add more interior furnitures

Show thinking

I have enhanced the material quality of the chapel interior and added new furnishings, including books on the pews, rosaries, decorative vases on the platform, candles, and floor pillows, all while keeping the original layout intact.

## B. AI - Assisted Prompt

Please improve my prompt to generate a professional architectural render

"the picture above is a chapel interior, improve my render but do not remove or change anything, improve...

Show thinking

Here is an improved prompt designed to generate a professional architectural render by enhancing material details and adding complementary furnishings, all while maintaining your original scene layout.

---

**Improved Prompt:**

**Style:** Ultra-high-resolution, photorealistic professional architectural visualization render, with sharp focus and hyper-realistic material rendering.

**Scene Composition:** A detailed, wide-angle interior view of the modern chapel from image_0.png, looking towards the altar. The geometric structure, window placements, ceiling design, and the number and placement of the existing pews and furniture must be preserved exactly.

**Material Improvements (Focus on tactile realism):**

- **Walls:** Highly detailed, tactile exposed aggregate concrete with refined formwork textures. Deep-grained white oak wall paneling with precise, clean-cut acoustic perforations.
- **Ceiling:** Richer, textured slatted wood ceiling with integrated linear cove lighting that is warmer and more dimensional.
- **Floor:** Polished terrazzo with deeper aggregate visibility and crystal-clear reflections of the interior and exterior.
- **Windows:** High-clarity glass with precise frame detailing and clear, layered exterior garden views with enhanced, detailed plantings.
- **Furniture:** Highly textured woven linen upholstery on all pew cushions and the small lounge chairs (near left). More refined wood grain on all original wooden furniture.

**Interior Furnishings (Strategic Additions - Preserving space):**

- **Central Aisle:** Add a few low-profile, textured woven-fiber runner rugs to define the path.
- **Pews:** Discreetly place varied hymnals and a few sleek, minimal brass candle holders on the pews.
- **Far Left Console:** Keep the existing vase, but add a sleek, modern brass desk lamp and a minimal framed abstract art print above it.
- **Near Right Console:** Add a curated stack of diverse, leather-bound books and a more intricate, sculptural ceramic vase.
- **Altar Area:** Add a small, elegant prayer candle stand nearby and a subtle, high-quality detailed prayer book.
- **General Ambiance:** Integrate discreet, warm-toned modern wall sconces between panels. Add a sleek, minimalist baptismal font on a polished stone base near the right console.

**Lighting & Atmosphere:** Enhanced natural light from high-clarity windows casting soft, dappled patterns. Warmer, layered linear lighting and integrated LED shelf lights on consoles for depth. An atmosphere of pristine, modern serenity.

## ANALYSIS AND REFLECTION

**What differences did you observe between the outputs?**

**Which output was more useful or accurate? Why?**
None, both of the outputs looked very good, and they definitely look real; it's just the fact that AI could never make something as natural as how we do it. At first glance, you could definitely tell right away that both outputs were AI-generated, furniture was scattered and messy

**How did the improved prompt affect:**
The improved prompt produced a photorealistic image, but it just doesn't make any sense. The image appears real, but upon thorough examination and analysis, it turns out to be fake and unnatural. Nothing makes sense, either, making the image irrelevant.

**What specific changes in the prompt led to better results?**
Image quality got better when I included "professional" in my prompt

**What did you learn about prompt engineering?**
I learned that AI can't replace humans, not soon enough. Prompt engineering is hard and unstable at the moment.
